

Economic Growth Region 10

Statistical Data Report for September 2014, Released October 2014

Regional and State Unemployment (seasonally adjusted)

Regional and state unemployment rates were generally little changed in September. Thirty-one states had unemployment rate decreases from August, eight states had increases, and 11 states and the District of Columbia had no change, the U.S. Bureau of Labor Statistics reported. Forty-two states and the District of Columbia had unemployment rate decreases from a year earlier, five states had increases, and three states had no change. The national jobless rate declined to 5.9 percent from August and was 1.3 percentage points lower than in September 2013.

Georgia had the highest unemployment rate among the states in September, 7.9 percent. North Dakota again had the lowest jobless rate, 2.8 percent. In total, 16 states had unemployment rates significantly lower than the U.S. figure of 5.9 percent, 10 states and the District of Columbia had measurably higher rates, and 24 states had rates that were not appreciably different from that of the nation.

Economic Growth Region (EGR) 10

Clark, Crawford, Floyd, Harrison, Scott, and Washington Counties.

How has Labor force participation among young moms and dads changed?

(Excerpt from the Bureau of Labor Statistics, Beyond the Numbers, September , 2014)

Source: www.bls.gov/opub/btn/volume-3/how-has-labor-force-participation-among-young-moms-and-dads-changed.htm

Over the past four decades, the labor force has changed dramatically. Women's labor market participation rates have risen, and women are increasingly working throughout their adult lives. One consequence of these changes is that men's and women's roles have been converging, with men taking a more active role at home, doing a greater share of housework and child care, and women spending more time in paid work.

Among women born between 1980 and 1984, labor force participation of new mothers ages 18 to 24 was greater than that of new mothers born between 1957 and 1964. While labor force participation of new mothers was less than that of women without children in both cohorts, the differential was greater for new mothers born between 1957 and 1964.

Percentage of year in labor force (employed or unemployed), by age and parental status, 1979 cohort

Source: U.S. Bureau of Labor Statistics, National Longitudinal Survey of Youth 1979.

Among women born between 1957 and 1964, new mothers at the age of 18 participated in the labor force about 33 percent of the year, compared with 67 percent for 18-year-old women without children. In contrast, 18-year-old mothers born between 1980 and 1984 participated in the labor force about 50 percent of the year, compared to almost 69 percent of women without children. Among men born between 1957 and 1964, new fathers at the age of 18 participated in the labor force 84 percent of the year, compared with almost 70 percent for men without children. Among men born between 1980 and 1984, labor force participation was 77 percent for new fathers and almost 67 percent for men without children. Among men and women born between 1957 and 1964, 18-year-old new mothers
